ROBERT D. COMER

Bob Comer is a director in the firm's Natural Resources, Energy and the Environment practice group and is resident in the Denver office. His natural resource and environmental practice focuses on mining, oil, gas, renewables, water, and energy development on federal, tribal, state and private lands. Bob has particular expertise in public land management and sensitive resource protection involving endangered species, wetlands, cultural resources and Native American law.

During his distinguished career, Bob has held senior leadership positions with businesses and the federal government, and is well known for his ability to design and implement effective legal and practical solutions to overcome project permitting and compliance challenges. During his tenure with the US Department of the Interior, Bob served as Associate Solicitor (now the Deputy Solicitor position) in Washington, D.C., where he directed legal strategy nationwide on matters pertaining to mining, oil, gas, energy, renewables, land use and water. As Rocky Mountain Regional Solicitor, he led one of the most active NEPA and energy and litigation portfolios in the Department. Bob also has served as General Counsel and Chief Administrative Officer for a dual-listed gold company and as Associate General Counsel for a Fortune 500 mining, mineral processing and specialty metals company, where he had legal responsibility at most operating units, and more than 30 superfund/NRD properties.

Bob also is a leading authority in natural resource permitting, compliance, mining law and mineral leasing. He has testified before the U.S. Congress on the Mining Law, prepared the first North American Justified Deviation under the Equator Principles (version 4) and has advanced numerous resource projects. Bob counsels industry and government executives on a wide array of sensitive resource issues involving the Equator Principles, tribal and native American concerns, cultural resources, energy transmission, public land access, federal land exchanges, rights of way, wilderness, endangered species, water quality and rights, wetlands, mineral leasing, title security, royalties, superfund, toxics, environmental and land use compliance, enforcement, litigation, and NEPA, permitting and government relations strategies.

From the days when he served as in-house counsel, Bob has enjoyed working with Fennemore— and is now excited to be a part of our firm's natural resources team at this critical time for sustainable development in the American west.
